

Yesol Jeong

B.S. Candidate, Chemical and Biological Engineering, Seoul National University

Email: yesorno@snu.ac.kr | GitHub: github.com/yesol-jeong | Website: yesol-jeong.github.io

Research Interests

- Bioengineering, biomaterials, stem cell engineering, microdroplet chemistry, metabolism, and regenerative medicine.

Education

- Mar. 2023 - Present: B.S. in Chemical and Biological Engineering, Seoul National University.

Research Experience

- **Undergraduate Research Intern, Biomimetic Materials and Stem Cell Engineering Lab** (Jun. 2025 - Present): conducted research on ischemic wound regeneration using scCO₂-dried secretome; performed secretome drying experiments with supercritical CO₂, in vitro assays, tube formation and angiogenesis assays, and in vivo model-related experiments.

- **Undergraduate Research Intern, Applied Bioscience and Engineering Lab** (Dec. 2024 - Feb. 2025): conducted research on artificial C₄ photosynthesis in water microdroplets; used GC-MS and H-NMR analysis tools.

Activities

- **Vice President, SNU Tomorrow's Engineering Membership (STEM)**: contributed to academic seminars, public relations with overseas universities, mentoring programs, volunteer service, and leadership activities.

Awards and Publications

- Gold Prize, Korean Institute of Chemical Engineers Workshop (Feb. 2026).

- Excellence Award, SNU CES2026 Programme Team Project (Jan. 2026).

- H.S. Lee et al., "Ischemic Wound Regeneration Using Precipitation with Compressed Fluid Anti-Solvent-Dried Secretome" (submitted to Biomaterials Journal, 2026).

Scholarships

- Yujin Scholarship; SNU Kwanak Foundation Scholarship; Chongro Foundation Scholarship; MG Hope Foundation Scholarship.

Skills

- Experimental techniques: cell work, in vitro assays, GC-MS, H-NMR, UV-Vis spectroscopy.

- Software and programming: ImageJ, GraphPad, ChemDraw, ASPEN, Python, Java, C++.

Planned Courses

- Data Structures; Chemical Process Experiments.
